GraspLoop AI

Robotic picking that learns every SKU

Series A · October 2026

Mid-size warehouses can’t hire pickers fast enough

>100%

peak-season picker turnover

3×

order growth vs. headcount since 2020

$0.42

fully loaded cost per pick, rising 9%/yr

Automation vendors serve the top 1% of warehouses. The other 99% are left with clipboards.

GraspLoop: an arm, a brain and a safety net

1

Arm

Off-the-shelf 6-axis arm + our suction/finger gripper. Installs in a day.

2

LoopBrain

Our grasping model learns a new SKU in 10 minutes from 20 picks.

3

Safety net

Remote operators resolve hard picks in seconds; every fix becomes training data.

Why now

- Robot foundation models made generalist grasping practical in 2025–26
- Collaborative arms fell below $25K
- E-commerce returns and SKU proliferation broke rule-based picking
- Labor costs in logistics keep rising

A $120B market

TAM $120B

Global warehouse automation, 2030

SAM $9B

US/EU piece-picking, mid-size sites

SOM $450M

Reachable by 2030

Traction

$2.4M

ARR

8×

YoY ARR growth

14

customers incl. 3 Fortune 500 retailers

99.7%

pick success

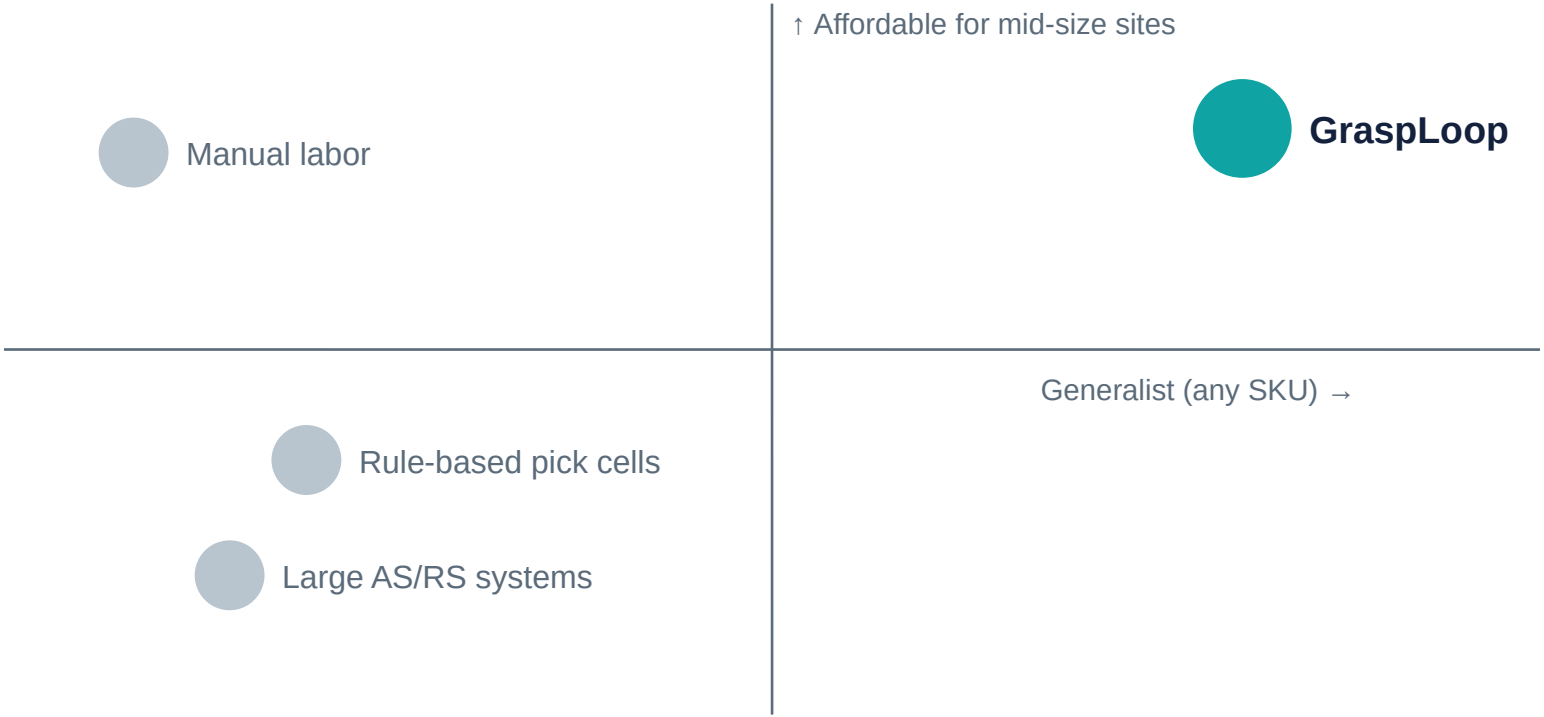

160%

net revenue retention

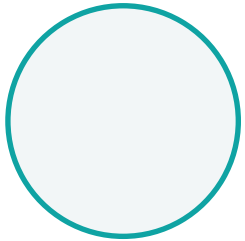

Business model: Robots-as-a-Service

Metric	Value
Price	$3,500 per robot per month, 3-year term
Gross margin	68%
CAC payback	4 months
Sales cycle	9 months (pilot → contract)
Hardware cost per robot	$42,000

Competition

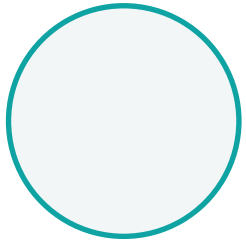

Team

Dana Whitfield

CEO

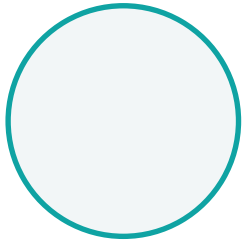

Ex-ops lead at a large e-commerce robotics program; 2 prior exits

Arjun Mehta, PhD

CTO

Robot learning PhD; ex-research scientist at a big-tech lab

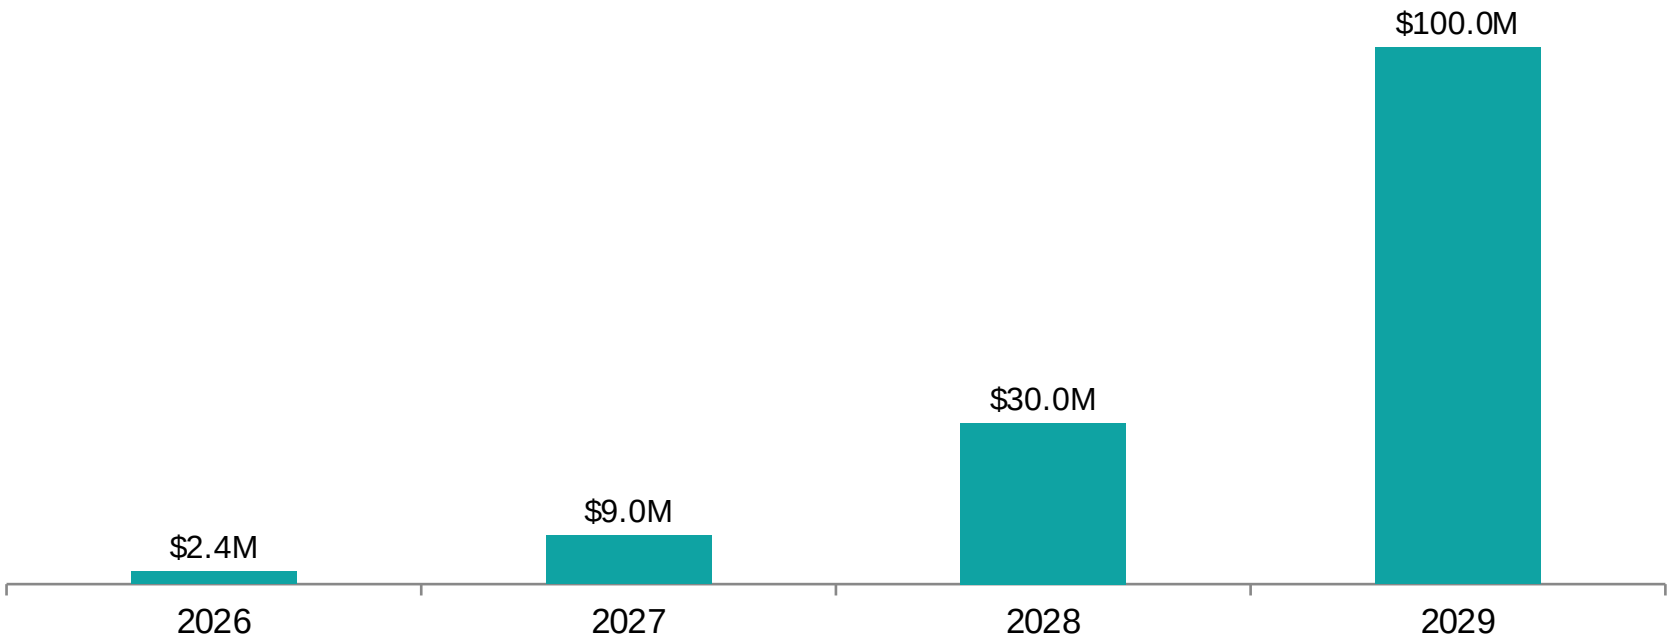

Lena Okafor

VP Customer Ops

Ran 14 fulfillment centers at a 3PL

All people are fictional.
