Five companies, different routes to adoption

Financing benchmarks use different dates and transaction structures

Company / layer	Financing reference	Commercial evidence
Figure AI Full-stack humanoid	$39B post-money Sep 2025, outside window	BMW confirms pilot contribution. Revenue not disclosed.
Physical Intelligence Robot foundation model	$5.6B investor baseline Nov 2025, basis unspecified	API beta, Oct 2026. Revenue not disclosed.
Skild AI Model + operations	>$14B valuation Jan 2026	>$100M ARR, Sep 2026. Company-reported, unaudited.
Agility Robotics Logistics humanoid	$2.5B proposed SPAC Vote scheduled 2 Nov 2026	$1.782M FY2025 net sales. Indexed SEC table evidence.
1X Technologies Home humanoid	~$6B reported talks Unconfirmed acquisition value	Preorders. External customer unit count remains unverified.

A proposed or reported valuation does not establish a closed transaction or current market value.

The differentiators shape the diligence agenda

Hardware, model distribution and target environments require different evidence

Company	Distinctive position	Evidence the IC still needs
Figure AI	Integrated humanoid + proprietary AI, with a customer-confirmed BMW pilot	Paid fleet size, autonomy across shifts, and service cost per productive hour
Physical Intelligence	Model research and hosted API across partner robot platforms	Conversion of beta/partners to paying use, intervention and hosting economics
Skild AI	Commercial model deployments plus acquired mobile-robot operations	ARR reconciliation, customer retention, and acquired hardware obligations
Agility Robotics	Defined logistics workflows and SPAC financial disclosure	Conditional order conversion, liquidity through transaction close
1X Technologies	Home use and teleoperation-supported learning, with manufacturing ramp	External deliveries, supervision cost, and home privacy controls

These business models require different proof of adoption and operating economics.

Three implications for the investment committee

Analyst judgment based on the inspected public evidence

1 Commercial evidence should drive underwriting

Request contracts, cash collections and retention. Separate recognized revenue from ARR, pilot activity, preorders and conditional order value.

2 Financing comparisons need a common basis

Keep historical priced rounds, proposed SPAC values and reported talks separate. Revisit Agility after the vote and any closing, without presuming either outcome.

3 Autonomy economics deserve a dedicated workstream

Measure interventions, productive utilization and service costs at customer sites. Capacity targets and model demonstrations cannot establish delivery economics.
